Molecular Property Spectrometer™
MPS™ Flammable Gas Sensor 5.0

OVERVIEW

NevadaNano's MPS Flammable Gas Sensor 5.0 represents the fifth-generation of this breakthrough technology, delivering industry-leading performance with a low cost of ownership. The smart sensor quickly detects, quantifies, and classifies myriad flammable gases and gas mixtures with unprecedented TrueLEL™ accuracy. It comes already factory calibrated for its entire 15+ year life—no field calibrations are required—and has built-in environmental compensation and automatic self-testing for fail-safe operation. The sensor is robust, inherently immune to poisoning, and certified intrinsically safe. Sensor readings are output on a digital bus or a configurable analog output.

TrueLEL™ GAS DETECTION

Gas	Formula	Detection Range	Accuracy (0-50 %LEL)
butane	C_4H_{10}	0-100 %LEL	±5 %LEL
ethane	C_2H_6	0-100 %LEL	±5 %LEL
hydrogen	**H_2**	**0-100 %LEL**	**±5 %LEL**
isobutane	C_4H_{10}	0-100 %LEL	±5 %LEL
isobutylene	C_4H_8	0-100 %LEL	±6 %LEL
isopropanol	C_3H_8O	0-100 %LEL	±10 %LEL
methane	**CH_4**	**0-100 %LEL**	**±3 %LEL**
pentane	C_5H_{12}	0-100 %LEL	±7 %LEL
propane	C_3H_8	0-100 %LEL	±7 %LEL
propylene	C_3H_6	0-100 %LEL	±5 %LEL
toluene	C_7H_8	0-100 %LEL	±12 %LEL
xylene	C_8H_{10}	0-100 %LEL	±12 %LEL

Accuracy guaranteed for methane and hydrogen across full environmental range. Other gases will typically meet the published tolerances across the full environmental range, but are guaranteed only near standard conditions of 20 °C, 50 %RH. The sensor is capable of detecting most common flammable gases/vapors (see page 5).

PERFORMANCE

Resolution	0.1 %LEL
Response time (T90)	< 20 seconds
Calibration	Factory calibrated

ENVIRONMENTAL OPERATING RANGE

Temperature	−40 to 75 °C
Humidity	0 to 100 %RH
Pressure	80 to 120 kPa

Series 4 ("S4")

Mini

KEY FEATURES

- Built-in environmental compensation
- Automatic multi-gas accuracy in real-time
- Can detect flammable gas at start-up
- Built-in self-test for fail-safe operation
- Supports 15+ year lifetimes
- No calibration required
- Extremely poison resistant
- Can be powered by 3V
- Low average power: 27.3 mW typical at 3V
- Custom analog out configurations
- Intrinsically safe (IS) certified (S4 only)
- EN 50271:2018 Certified
- Compliant to IEC 60079-29-1 Edition 2.1 Annex A

OPERATING PRINCIPLE

The MPS transducer is a patented micro-machined membrane with an embedded Joule heater and resistance thermometer. The transducer is mounted on a PCB and packaged inside a rugged enclosure open to ambient air. Presence of a flammable gas causes changes in the thermodynamic properties of the air/gas mixture that are measured by the transducer. Sensor data are processed by patented algorithms to report an accurate concentration and classify the flammable gas.

SM-DS-0012-06

GAS CLASSIFICATION

The old way: Conventional sensing technologies (e.g. catalytic bead, NDIR) use a "k-factor" multiplier to convert raw sensor signals to gas concentrations in %LEL. These "k-factors" are based on known relative sensitivities of these sensors to different gases. A single "k-factor," corresponding to a particular gas, must be selected manually during system setup. When the sensor is later exposed to any gas other than the one selected, significant errors in reported concentration can occur.

The MPS way: The MPS sensor applies conversion factors automatically and in real-time, based on the "live" measured thermal properties of the ambient air/gas and the current environmental conditions. The %LEL values reported for the bulk, which may contain a mixture of gases, achieve the same high levels of accuracy as those achieved with single gases.

The MPS way: a dynamic "k-factor" is automatically applied to every measurement, based on multiple gas property measurements made by the MPS.

The sensor also automatically outputs the class of flammable gas present, in the following categories:
CLASS 1: Hydrogen
Molecular Weight: 2.0 [g/mol]
Density: 0.09 [kg/m³]
Number of Carbons: 0

CLASS 2: Hydrogen Mixture
Avg. Mol. Weight: 1-14 [g/mol]
Avg. Density: 0.1-0.6 [kg/m³]
Number of Carbons: varies
This classification is unique as it guarantees the presence of hydrogen and another flammable gas
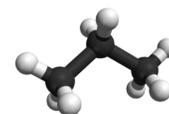

CLASS 3: Methane/Natural Gas
Avg. Mol. Weight: 16 to 19 [g/mol]
Avg. Density: 0.6-0.9 [kg/m³]
Typical Number of Carbons: 0-2
Gases having molecular properties similar to that of methane may be classified as methane (e.g. ammonia, acetylene)

### CLASS 4: Light Gas (or Light Gas Mixture)
Avg. Mol. Weight: 25 to 75 [g/mol]
Avg. Density: 1.2-2.5 [kg/m³]
Typical Number of Carbons: 1-4
Example Gases: Ethane, Propane, Isopropanol

### CLASS 5: Medium Gas (or Medium Gas Mixture)
Avg. Mol. Weight: 50 to 120 [g/mol]
Avg. Density: 1.5-4.0 [kg/m³]
Typical Number of Carbons: 2-8
Example Gas: Pentane

CLASS 6: Heavy Gas (or Heavy Gas Mixture)
Avg. Mol. Weight: 80+ [g/mol]
Avg. Density: 3.5+ [kg/m³]
Typical Number of Carbons: 6+
Example Gases: Octane, Toluene, Xylene

SELF-DIAGNOSTICS

The MPS Flammable Gas Sensor 5.0 automatically performs a comprehensive sequence of self-checks at power-up, and every 2 seconds during operation to ensure fail-safe operation. The MPS alerts the user of any sensor failure or status alert. For additional information on how to interpret and handle detected faults, refer to the MPS Flammable Gas Sensor 5.0 User Manual at www.nevadanano.com/downloads

These configurations also feature customized sensitivity slopes, which can include rising or falling Volts per %LEL. Contact NevadaNano for details.

SM-DS-0012-06

FLAMMABLE GASES DETECTED

The volume percentage (%VOL) corresponding to 100 %LEL for a given gas varies across regions and standards due to differences in criteria, including the methods used for ignition and for the determination of an explosion. The MPS Flammable Gas Sensor 5.0 is factory calibrated to achieve the accuracy levels shown below without any further recalibration or adjustment. The 5-pin digital version of the sensor can be queried via UART to report %LEL concentrations in accordance to either the ISO 10156 standard or the IEC60079-20-1 and companion specification EN61779. The 3-pin, analog-out version comes in two configurations, one with an output in accordance with ISO and one in accordance with IEC. (Note, the IEC output is the ISO output multiplied by 1.136).

The MPS as configured is confirmed to detect a variety of other gases not shown in the table below. These include: 1-butene, acetylene, ammonia, cyclohexane, decane, diesel, dimethyl carbonate, ethanol, gasoline vapors, hexane, and methanol. The sensor does not provide TrueLEL accuracy to these gases and will systematically over- or under-report, depending on the gas, and special precautions should be taken when using the MPS to detect these gases. Contact info@nevadanano.com for more information.
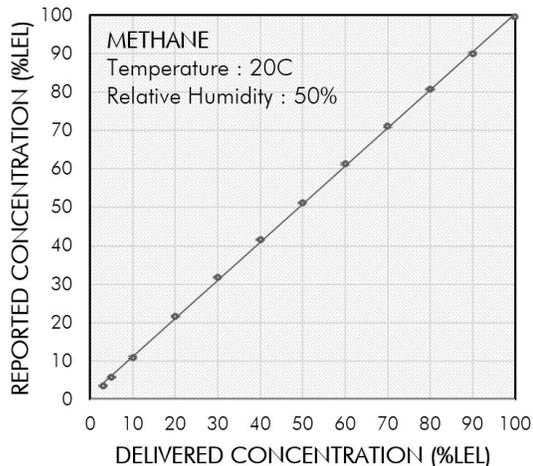

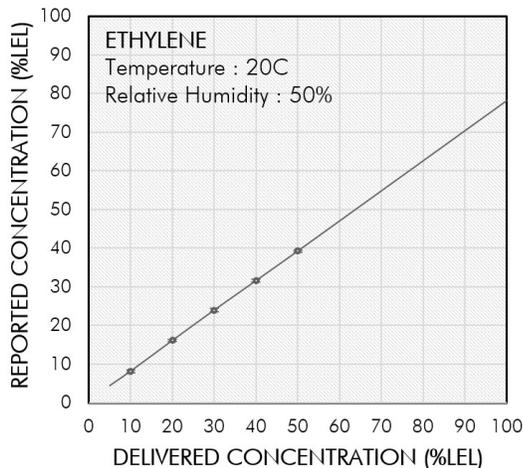

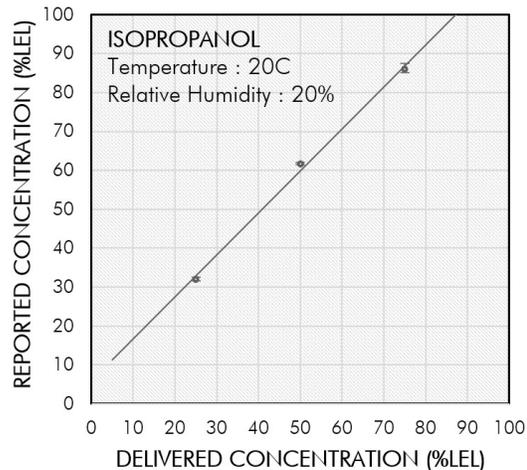

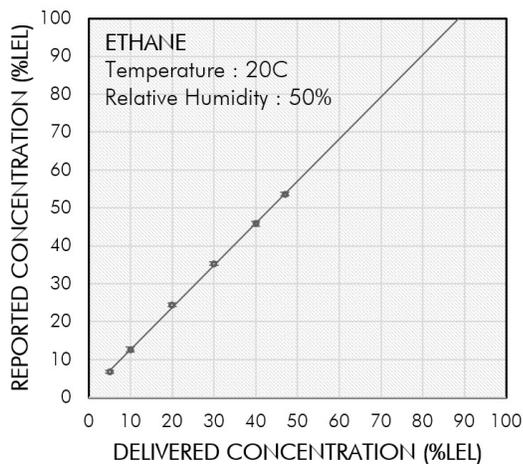

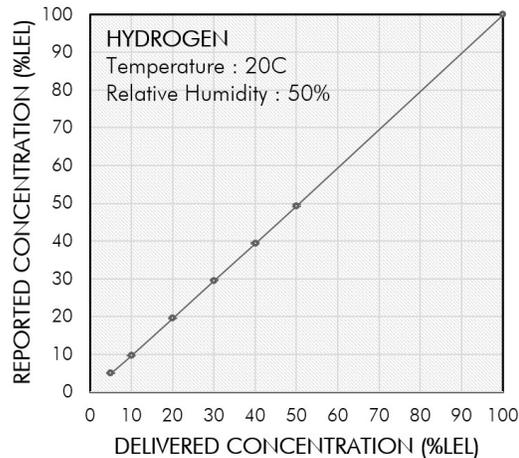

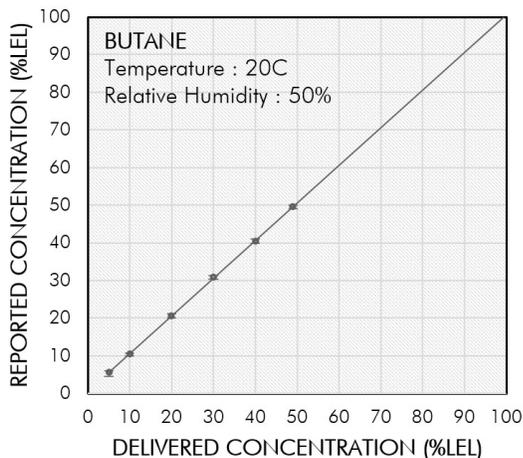

Gas	Formula	Class[4]	Detection Range [%LEL]	% Volume of gas at 100 %LEL (ISO 10156)	MPS Accuracy 0 to 50 %LEL (ISO 10156)	% Volume of gas at 100 %LEL (IEC60079-20-1)	MPS Accuracy 0 to 50 %LEL (IEC60079-20-1)

xylene	C_8H_{10}	6	0-100	1.1 %VOL	±12 %LEL	1.0 %VOL	±13 %LEL

Notes:
1) Accuracy guaranteed for methane and hydrogen across full environmental range.
2) Other gases will typically meet published tolerances across the full environmental range, but guaranteed only near standard conditions of 20°C, 50%RH.
3) Accuracy (+) %LEL corresponds to a higher-than-delivered reading and Accuracy (−) %LEL corresponds to a lower-than-delivered reading.
4) Refer to Gas Classification section on page 2 for value descriptions. Class values shown in table will typically be accurate across the full environmental range, but were determined near standard conditions of 20°C, 50%RH.

SM-DS-0012-06

FLAMMABLE GASES NOT DETECTED

The MPS Flammable Gas Sensor 5.0, as currently configured, does not detect:

- **Carbon Monoxide (CO):** CO is a toxic gas, immediately dangerous to life and health (IDLH) at 1,200 ppm; the lower explosive limit is 109,000 ppm. The sensor is immune to poisoning by CO.

- **Hydrogen Sulfide (H₂S):** H_2S is a toxic gas, immediately dangerous to life and health (IDLH) at 100 ppm; the lower explosive limit is 40,000 ppm. The sensor is immune to poisoning by H_2S.

There may be other gases the sensor does not detect that have not yet been assessed or tested. For additional information about a particular flammable gas, please contact NevadaNano at www.nevadanano.com.

RESPONSE TO NON-FLAMMABLE GASES

Because the MPS performs an analysis of the molecular properties of a given "air" sample, large-scale fluctuations in the relative concentrations of the components in the air can affect accuracy. False readings can occur at non-flammable gas concentration variations (from normal air) greater than about 1 %VOL (~10,000 ppm), as discussed below; accuracy of the %LEL readings can be impacted at concentration variations (from normal air) greater than about 0.1 %VOL (~1,000 ppm).

- **Oxygen (O₂):** Normal air has an O_2 concentration of 20.95% by volume. Higher ambient O_2 concentrations up to ~21.8 %VOL have little to no effect on the sensor. Concentrations exceeding this can be reported as a flammable gas at %LEL levels. The cross sensitivity is approximately 1.07 %LEL per 1 %vol O_2 (e.g., oxygen at 30 %vol in air, a 9.1 %vol enrichment, would read approximately 9.7 %LEL and be identified as Class 2 - Hydrogen Mixture). The sensor is immune to poisoning by O_2.

    - Note: if O_2 concentrations *decrease*, the sensor response will depend on what gas is displacing the oxygen. Flammable gases displace oxygen. Methane at 100 %LEL (5 %VOL methane) will reduce oxygen's relative concentration by 1.05 % VOL in ambient air, meaning the O_2 concentration decreases from 20.9 to 19.85 %VOL. Such flammable-gas-caused O_2 depletions are already taken into account by the sensor calibration and therefore cause no unwanted effects on sensor output.

    - NevadaNano has conducted testing to demonstrate the effect of extreme oxygen depletion. A gas stream containing 2.5 %VOL methane in balance zero air was diluted using a stream containing pure nitrogen to achieve 15, 10, and 5 %VOL O_2 levels. Note that the concentration of methane decreases as pure nitrogen is introduced into the gas stream. Calculated concentrations and the %LEL reported by the MPS are shown below.

	Nitrogen [%VOL]	Oxygen [%VOL]	Methane [%VOL]	Calculated [%LEL]	MPS error [%LEL]
50 %LEL Methane in Zero Air	77.1	20.4	2.5	50.0	+1.0
Diluting with N₂ to 15 %O₂	83.2	15.0	1.8	36.0	-6.0
Diluting with N₂ to 10 %O₂	88.8	10.0	1.2	24.0	-7.0
Diluting with N₂ to 5 %O₂	94.4	5.0	0.6	12.0	-12.0

*Calculated %LEL assumes normal "air" as the background. Actual %LEL is dictated by limiting oxygen concentration.

- **Carbon Dioxide (CO₂):** CO_2 is present at concentrations near 400 ppm in normal air. This ambient level of CO_2 is already taken into account by sensor calibrations. The sensor is unaffected by elevated CO_2 concentrations up to approximately 5,000 ppm. Concentrations above this can be misinterpreted by the sensor as flammable gas. The cross sensitivity is approximately 1.74 %LEL per 1,000 ppm CO_2 (e.g., CO_2 at 10,000 ppm would read approximately 17.4 %LEL). The sensor is immune to poisoning by CO_2.

    - Note: Exhaled human breath contains CO_2 at concentrations of approximately 4-5 %VOL (40,000-50,000 ppm). (During respiration, the CO_2 replaces oxygen, reducing its concentration from 20.95% by volume in normal air to 13.6-16% in exhaled air.) **As such, breathing directly onto the sensor can cause it to falsely report flammable gas for a brief period.**

SKU	Description
MPSF02-S42505-EX	MPS Flammable Gas Sensor 5.0, S4, 5-Pin, UART + Analog Out
MPSF02-S42309-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, UART + Analog Out + Auto Start (LEL ISO)
MPSF02-S423E9-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, UART + Analog Out + Auto Start (LEL IEC)
MPSF02-S423**-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, Custom Analog Out + Auto Start (LEL ISO or LEL IEC) ** indicates configuration number (e.g. C1)

SKU	Description
MPSF02-MN2505-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out
MPSF02-MN2509-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out + Auto Start (LEL ISO)
MPSF02-MN25E9-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out + Auto Start (LEL IEC)
MPSF02-MN25**-00	MPS Flammable Gas Sensor 5.0, Mini, Custom Analog Out + Auto Start (LEL ISO or LEL IEC) ** indicates configuration number (e.g. C1)

SM-DS-0012-06

PART NUMBER ORDERING GUIDE-CONT.

Please refer to the following table below when ordering the non-EN 50271 certified MPS Flammable Gas Sensor 5.0.

SKU	Description
MPSF04-S42505-EX	MPS Flammable Gas Sensor 5.0, S4, 5-Pin, UART + Analog Out
MPSF04-S42309-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, UART + Analog Out + Auto Start (LEL ISO)
MPSF04-S423E9-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, UART + Analog Out + Auto Start (LEL IEC)
MPSF04-S423**-EX	MPS Flammable Gas Sensor 5.0, S4, 3-Pin, Custom Analog Out + Auto Start (LEL ISO or LEL IEC) ** indicates configuration number (e.g. C1)

SKU	Description
MPSF04-MN2505-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out
MPSF04-MN2509-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out + Auto Start (LEL ISO)
MPSF04-MN25E9-00	MPS Flammable Gas Sensor 5.0, Mini, UART + Analog Out + Auto Start (LEL IEC)
MPSF04-MN25**-00	MPS Flammable Gas Sensor 5.0, Mini, Custom Analog Out + Auto Start (LEL ISO or LEL IEC) ** indicates configuration number (e.g. C1)

SM-DS-0012-06

Molecular Property Spectrometer™
MPS™ Flammable Gas Sensor 5.0

PART NUMBER ORDERING GUIDE-CONT.

When ordering a MPS Evaluation Kit, please specify the MPS Flammable Gas Sensor 5.0 part number to be evaluated.

SKU	Description
MPS999-S40000-99	MPS S4 Evaluation Kit (S4 sensor not included)
MPS999-MN0000-99	MPS Mini Evaluation Kit (not pictured; Mini sensor not included)
